

# How to Setup & Run this Project

## ❖ Install NodeJs ( Ignore If Already Installed)

1. Visit the official Node.js website i.e)  
<https://nodejs.org/en/download/>
2. Download the Node.js installer
3. Run the installer.
4. Follow the prompts in the installer.

## ❖ Steps To Run The Project

1. Open Project Folder In VS Code
2. Open Integrated Terminal
  - Right Click on Sidebar > Select "Open In Integrated Terminal"

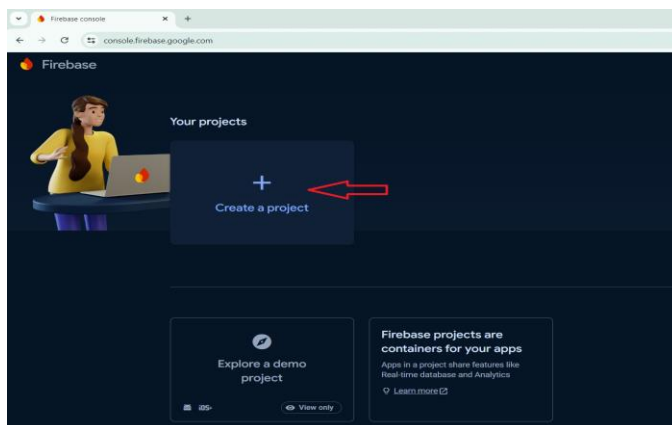

3. Type "**npm install**" and press Enter and Wait for Installation to be completed (requires Internet)

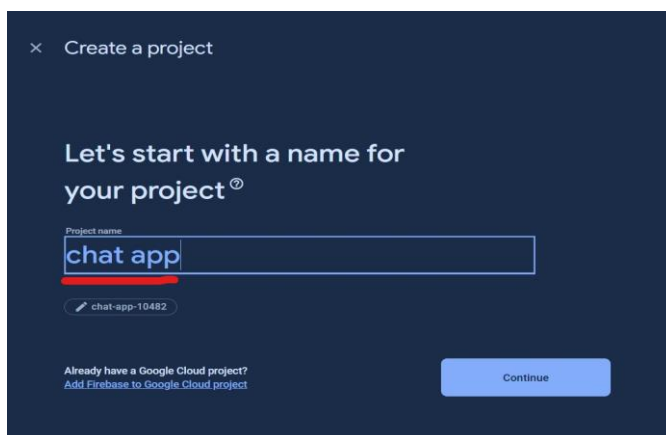

After Installation You will See 'node\_modules' Folder in the Sidebar

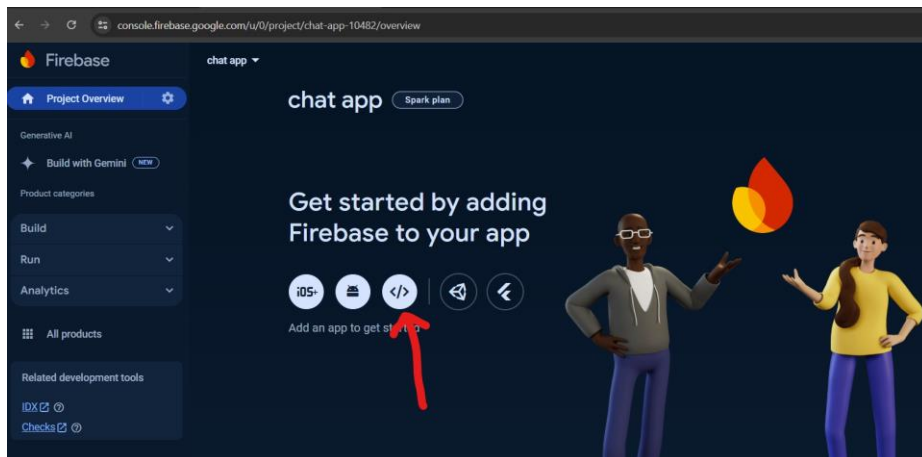

4. Create a new Firebase Project from [Here](#)

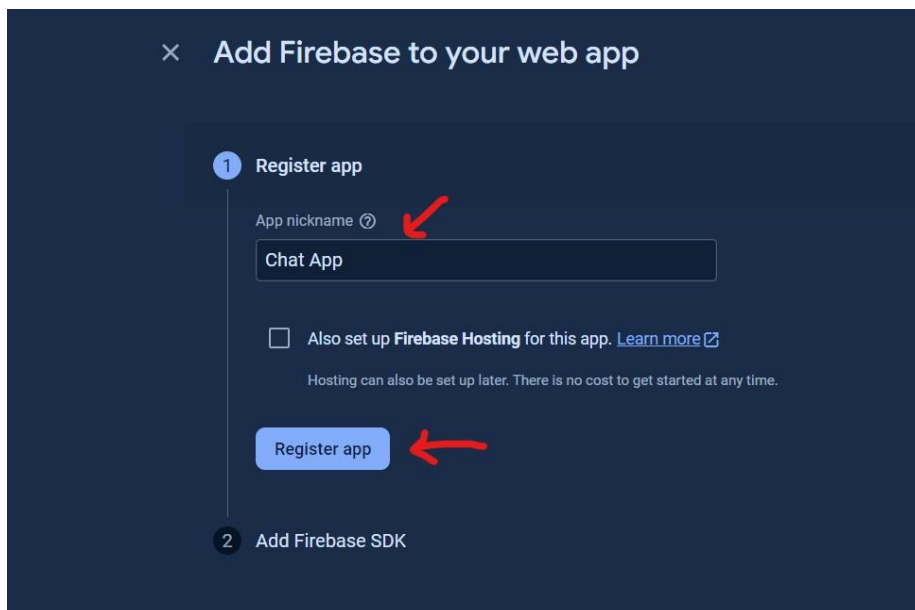

5. Provide project name

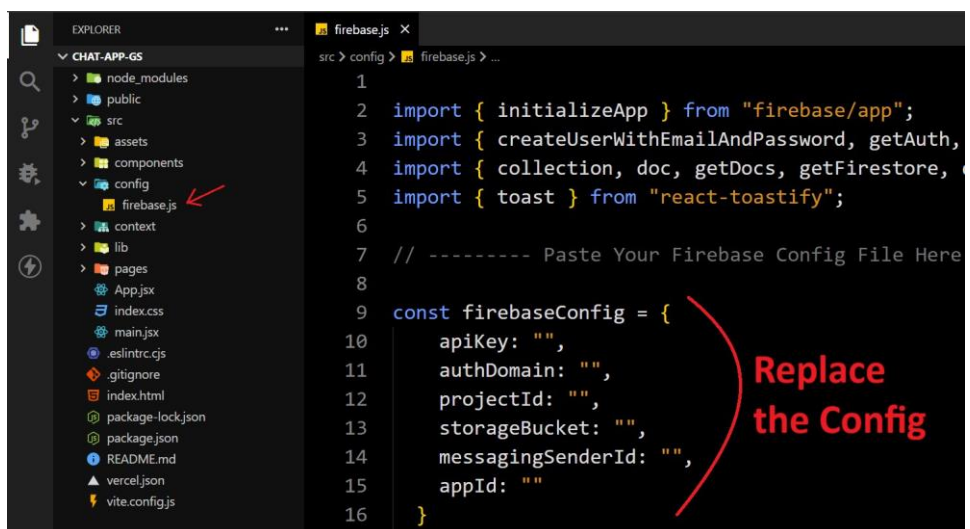

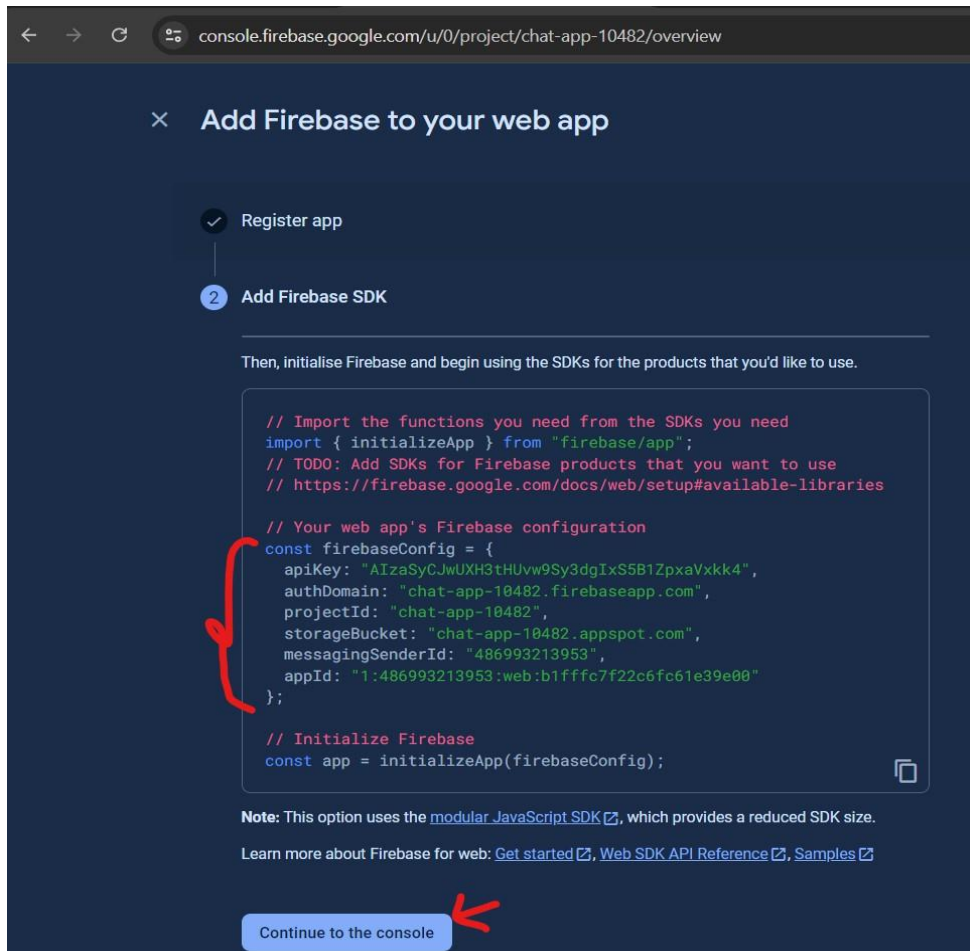

6. Click on WEB Icon

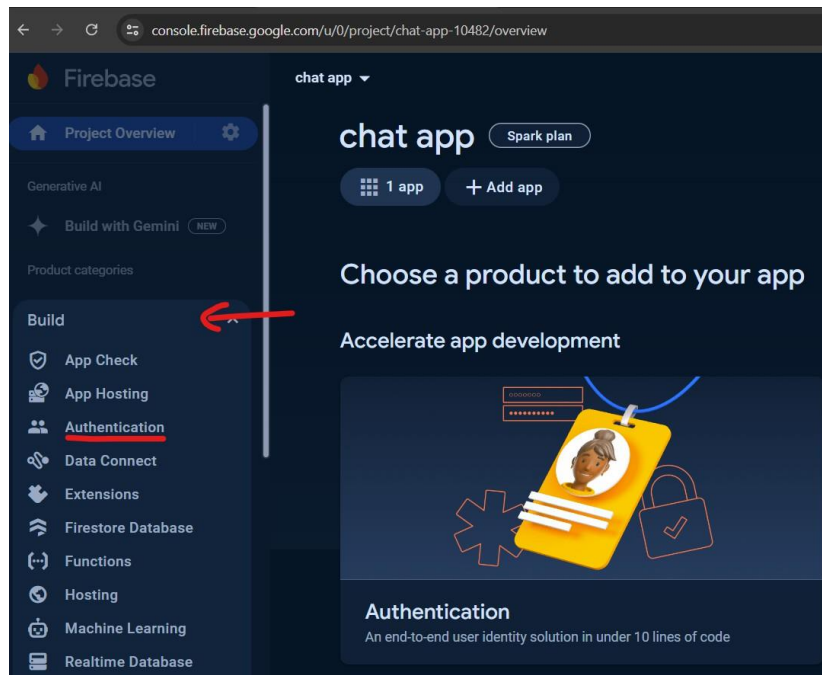

7. Provide App nickname and click on Register

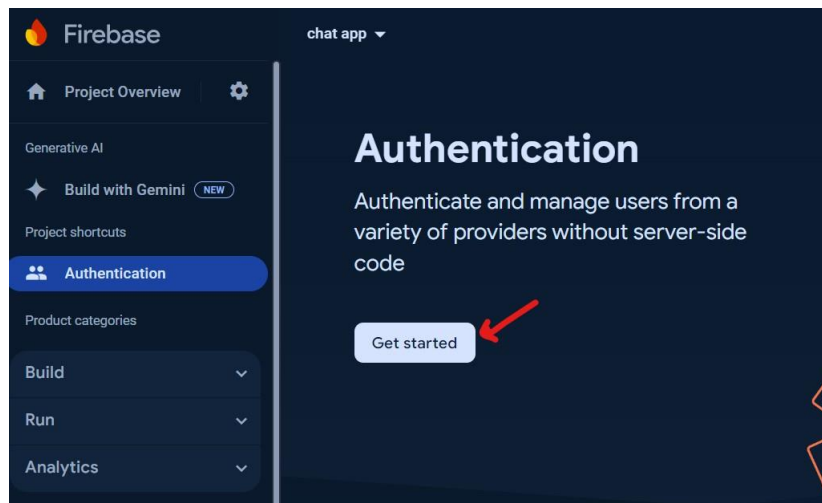

8. Now only copy the config code and paste it in **firebase.js** file save the file then click on continue button

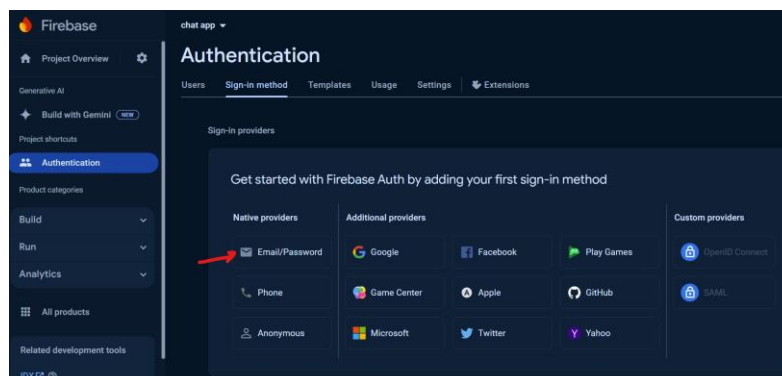

9. Now open build and click on Authentication

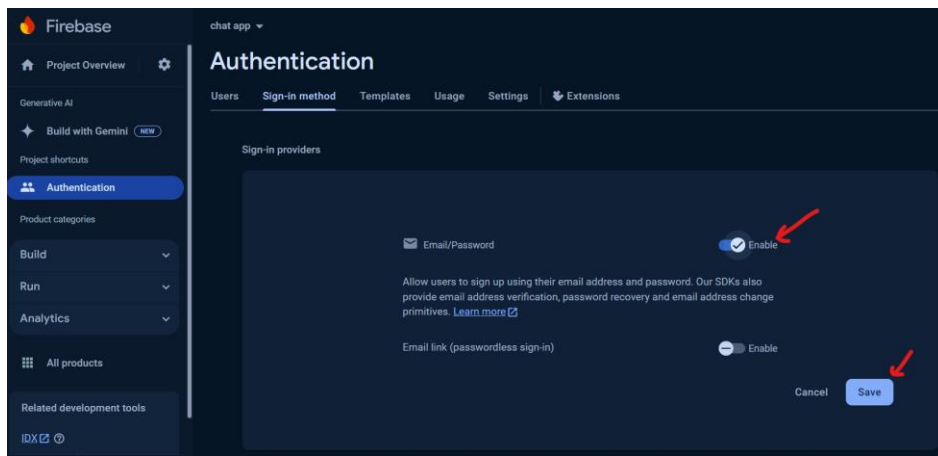

10. Now click on get started

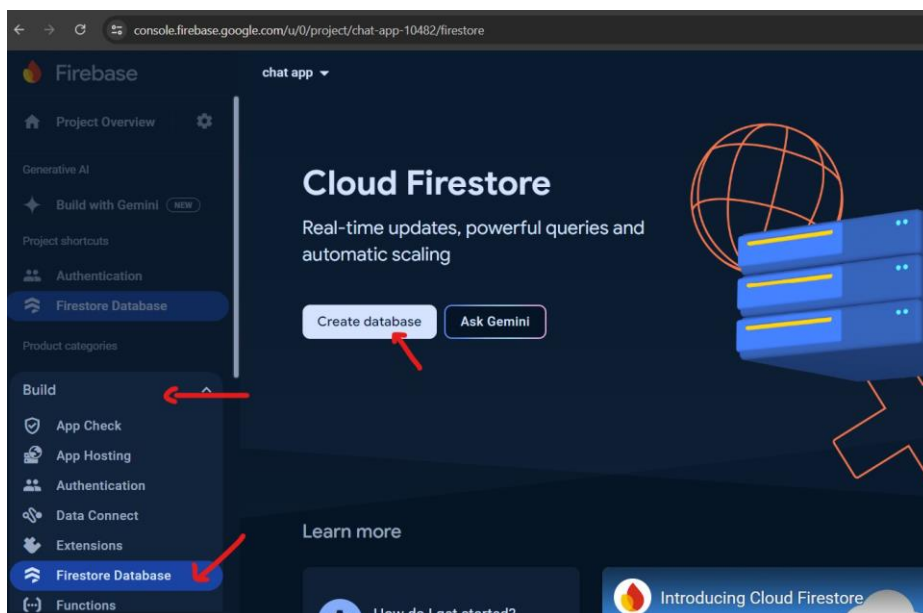

11. Select Email & Password

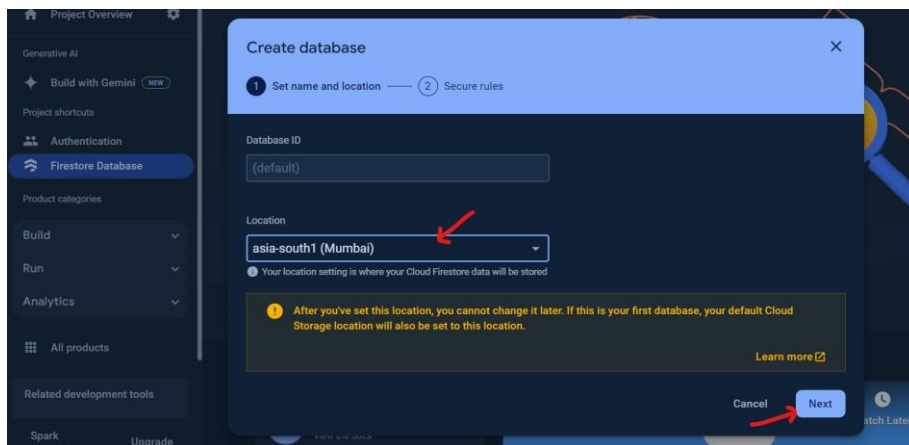

12. Enable the switch and save it

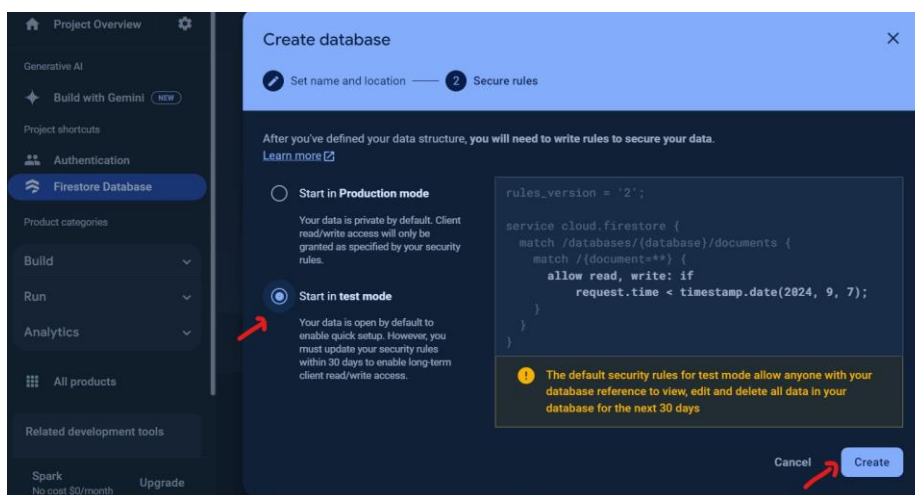

13. Now open build and click on firestore Database and click on create database

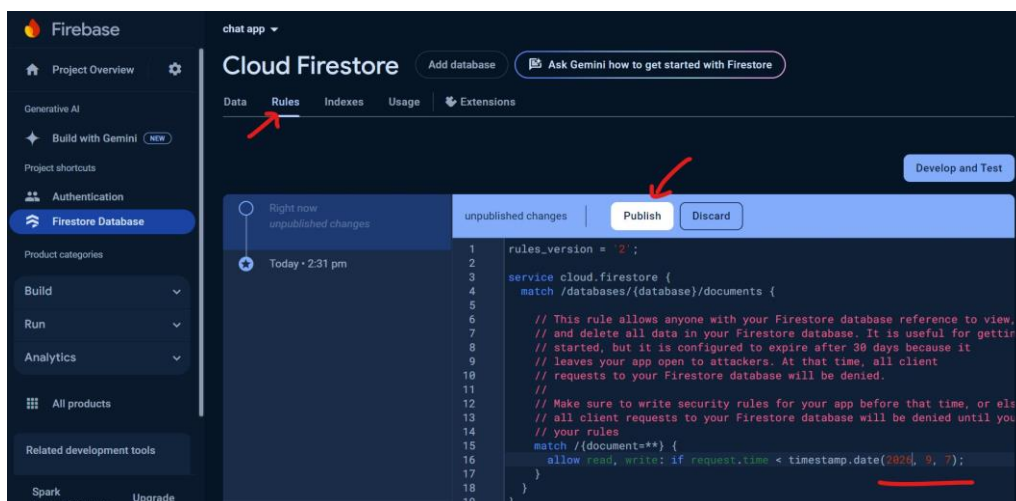

14. Select the nearest region and click on next button

15. Select test mode and click on create button

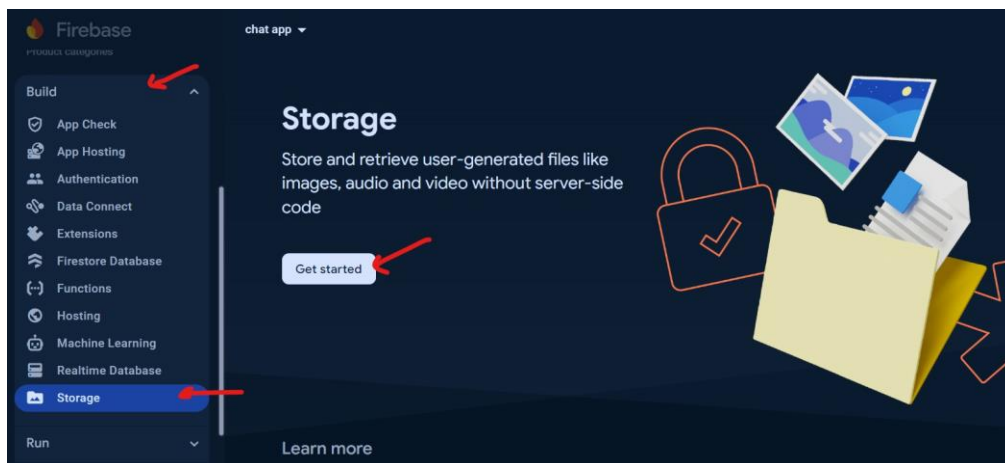

16. Now select rules change date and increase the year and publish changes

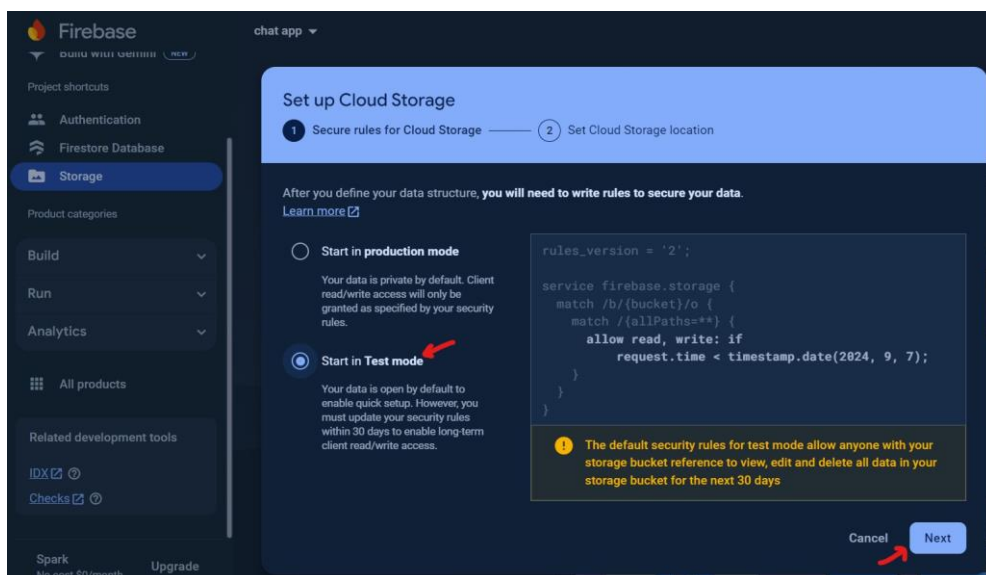

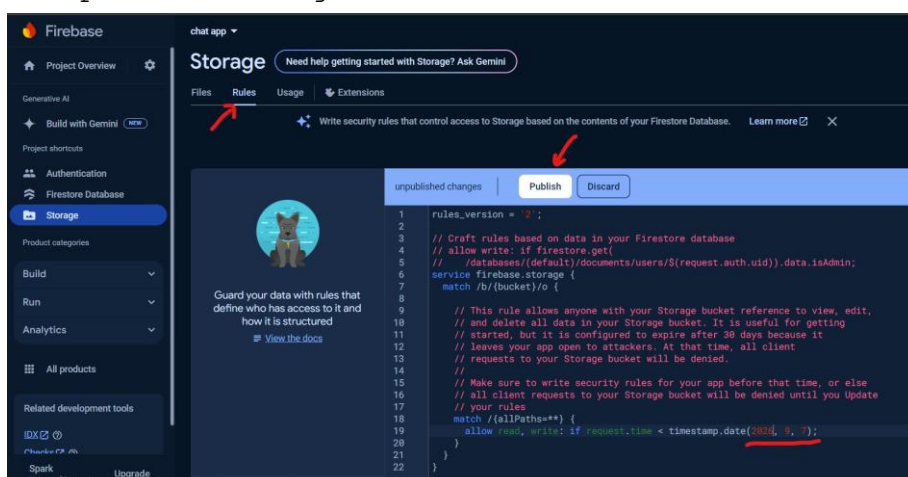

17. Open build select storage and click on Get Started

18. Select test mode and click on next button and select done

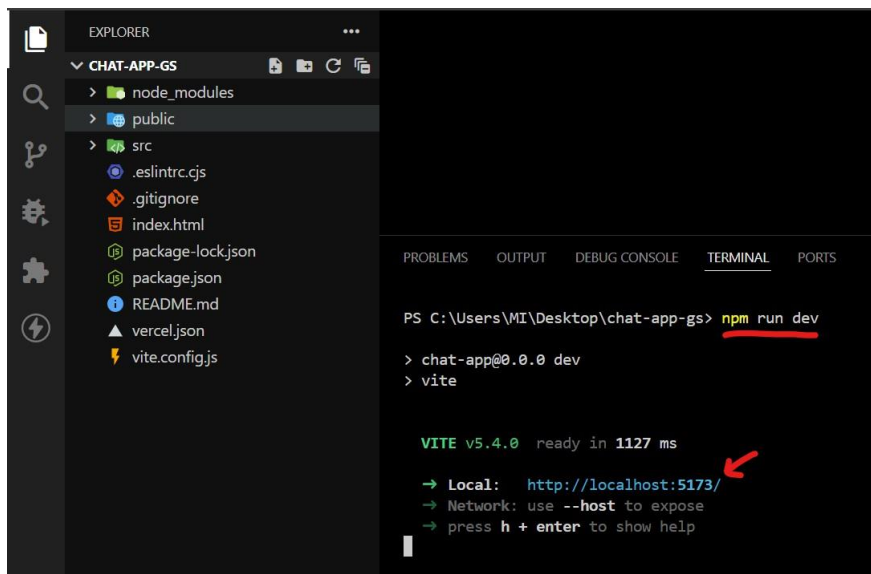

19. Select Storage rules change date and increase the year and publish changes

20. Now run the project using **npm run dev** command and open the link in web browser

The screenshot shows the Visual Studio Code interface. On the left, the Explorer sidebar displays the file structure of a project named 'CHAT-APP-GS'. The files listed include 'node\_modules', 'public', 'src', '.eslintrc.cjs', '.gitignore', 'index.html', 'package-lock.json', 'package.json', 'README.md', 'vercel.json', and 'vite.config.js'. The 'src' directory is currently selected. On the right, the Terminal panel is active, showing the command prompt 'PS C:\Users\MI\Desktop\chat-app-gs> npm run dev'. The command has been executed, resulting in the output: 'chat-app@0.0.0 dev' and 'vite'. Below this, Vite v5.4.0 reports it is ready in 1127 ms. It then provides the local development URL 'http://localhost:5173/' and instructions on how to use the '--host' flag for network access and how to press 'h + enter' to show help. A red arrow points to the '5173' in the local URL.

```
